Flood Detection Systems for the international market; providing effective, industrial-grade early warning systems for the home, office and local community.
WHAT ARE FLOOD DETECTION SYSTEMS?

Flood Detection Systems are a combination of special sensory equipment that detect and monitor the presence of rising water, before going on to alert property owners or the local authorities. The units are available individually or as a network that can be installed over a wide area.

OUR GOAL

We aim to give countries around the world unprecedented access to some of the finest Flood Detection Equipment available, as a means to reduce the associated risks, expenses and damages that people face at the hands of floods.

EFFECTIVE EARLY WARNING SYSTEMS

For your utmost peace of mind, our Flood Detection Systems can run for up to 7 years before the need for a service. This is longer than any industrial flood detection systems available today and gives rise to an unparalleled level of protection.

WHY USE FLOOD DETECTION SYSTEMS?

Floods account for over $200 Billion (US) worth of damage to properties around the globe, every year.

Floods are responsible for the most deaths by natural disaster than any other weather-related hazard.

Floods cause lasting damage to transportation networks, communications systems, power grids and water supplies in even the most developed countries.

RELIABLE FLOOD DETECTION EQUIPMENT RESULTS IN:

REDUCED LOSS OF LIFE
By increasing evacuation time, people have more chance to escape the impending dangers, unscathed.

LOWER INSURANCE PREMIUMS
Property and life insurance companies will often discount their premiums for customers who invest in flood detection systems.

DECREASED RISK OF DISEASE
Floods result in large bodies of stagnant water and leaked sewerage - an advanced warning allows for more people to be evacuated before illness spreads.

PRICELESS GOODS DON’T PERISH
Memorabilia and priceless items have a greater chance of survival as people have longer to find suitable protection or arrange for pre-flood transportation.
PERSONAL SOLUTIONS
Many people tend to overlook an important element of how destructive floods can be. Further to the financial costs involved, priceless memorabilia, irreplaceable photo albums and even pets can perish. Protect your loved ones and your belongings with a household flood detection system today.

COMMERCIAL SOLUTIONS
By installing a commercial flood detection system in your offices or warehouses, you not only lower the risk of injuries to your personnel, but you also reduce insurance premiums and gain essential time to back up crucial data and salvage vital assets. Book your once-off FDS installation and enjoy some real peace of mind.

REGIONAL/GOVERNMENT SOLUTIONS
Our durable, industrial-grade sensors can be installed across a broad range of environments and connected to either one central monitoring station or multiple networks to relay information to the relevant authorities. This ensures a more effective evacuation procedure in the event of an impending flood.

27 COUNTRIES THAT HAVE SUFFERED FROM SIGNIFICANT FLOODS IN THE LAST 20 YEARS:

AFRICA:
- Angola
- Benin
- Ethiopia
- Mozambique
- Namibia

ASIA:
- Bangladesh
- China
- India
- Indonesia
- Japan
- North Korea
- Malaysia
- Pakistan
- South Thailand

EUROPE:
- Czech Republic
- Italy
- Portugal
- Turkey
- United Kingdom

OCEANIA:
- Australia
- Fiji
- New Zealand

N. AMERICA:
- Canada
- U.S.A.

S. AMERICA:
- Brazil
- Chile

FLOOD DETECTION SYSTEMS CAN BE INSTALLED AS:

WIRELESS
OR
HARD-WIRED

Depending on your property or the scale of the installation, we can work to have your systems installed in as little as a day.
Thanks to DSC’s impressive flood detection battery technologies, our units can deliver up to 7-years of service before needing any maintenance.

- Lowers Home & Office Insurance Rates
- Provides vital, additional evacuation time
- Reduces the likelihood of flood-related deaths
- Decrease chances of spreading diseases
- Lessen your odds of becoming stranded
- Find valuable time to salvage cherished items

“Through our team of local professionals and an expansive network of trusted security specialists, we provide the expert services you need to have your flood detection systems up and running in as little as a day.”

Have us install your home, office or regional flood detection sensors today and enjoy the benefits of our reliable early warning systems.

SAVE TIME. SAVE MONEY. SAVE LIVES.
